

AN-01A optional external antenna

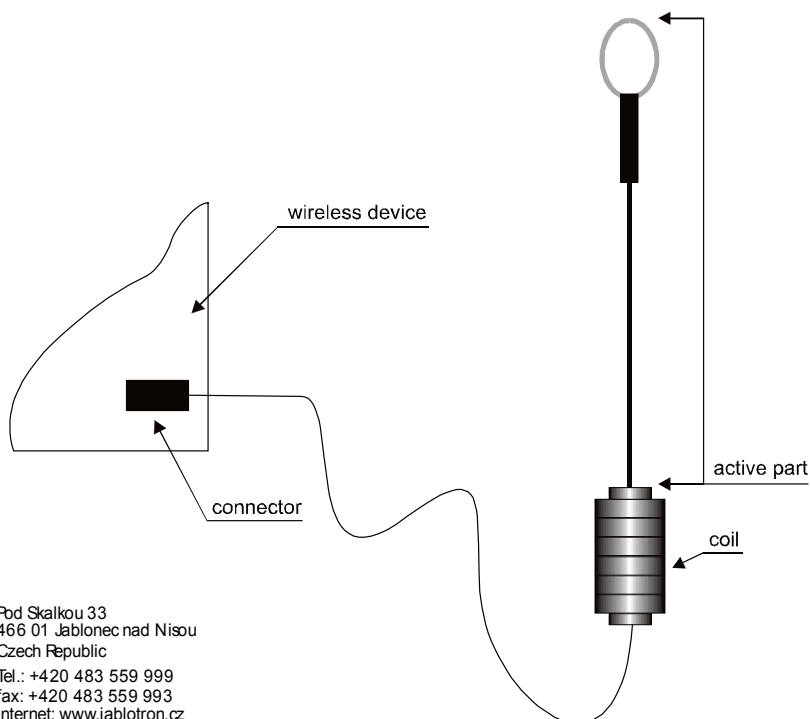

This antenna is designed for Jablotron's wireless products, which use frequency 433.9 MHz and are equipped with connector for AN-01 type of external antenna. If the AN-01A antenna is used, the internal antenna must be disconnected in the device (see the wireless device manual).

The active part of the antenna should be installed vertically and it should not be obstructed by any metal object.

If the antenna is used for alarm system, it should be located in the area, which is covered (protected) with the alarm system.

Technical data:

<i>working frequency</i>	433.9 MHz
<i>impedance</i>	50 Ω
<i>total length</i>	2 m
<i>active part length</i>	0.34 m
